

Accelerate patient handoffs and boost collaboration with **Nymbl's LMN Generator**

PTs spend valuable time creating Letters of Medical Necessity (LMNs), which takes time away from patient care and often requires multiple revisions to meet reimbursement requirements.

ATPs struggle with the time-consuming coordination of paperwork for complex durable medical equipment reimbursement, leading to delays and inefficiencies in getting necessary equipment to patients.

The Nymbl LMN Generator

By automating the creation of LMNs and enabling secure information exchange between therapists and ATPs, Nymbl reduces administrative burden, minimizes claim denials, and accelerates equipment delivery. This leads to improved efficiency, better referral relationships, and superior patient outcomes.

Key benefits:

- 1. Enhances Workflow Efficiency:** Integration with existing practice management systems for seamless LMN generation within current workflows.
- 2. Reduces Administrative Burden & Saves Time:** By reducing documentation time (saving 10-20 minutes per note), therapists can focus more on patient care.
- 3. Strengthens Patient Advocacy:** A well-supported LMN accelerates the delivery of medically necessary equipment to patients.
- 4. Improves Documentation Accuracy & Compliance:** Automated LMN tools ensure documentation meets strict insurance guidelines and regulatory requirements, improving accuracy and compliance by aligning with payer-specific standards.

It's hard to imagine going back to the old way

Factors	NOT Using LMN Generator	Using LMN Generator
LMN Creation Time	Manually convert patient evaluations into LMNs which involves extracting data, drafting, revising, and cross-referencing payer requirements. With multiple logins, this takes 15-30 minutes on average.	Backed by automation and AI assistance, you can save 10-20 minutes per note. Therapists can generate SOAP or summary notes securely via Single Sign-On.
Documentation Accuracy	Manual entry and reliance on basic templates, which creates a higher likelihood of mistakes or inaccuracies.	AI-powered tools not only save time, but also unlock high accuracy, ensuring compliance with payer-specific requirements.
Administrative Burden	Repetitive, time-consuming task of extracting patient information, reformatting for insurance, and ensuring compliance with payer requirements. Constant administrative checks are also needed to track LMN completion and delivery.	Access patient eval data without manual extraction or reformatting with a system that keeps you compliant with payer requirements and eliminates repetitive tasks. Plus, administrative checks enable effortless tracking of LMN completion and delivery.
Patient Care Delivery	Slower processing leads to potential delays in getting equipment to patients.	Faster processing, leading to quicker equipment delivery and more timely patient care.
Revisions & Payer Communication	The reality of multiple revisions leads to slower response times and back-and-forth with CRT providers and payers.	Fewer revisions required due to automated checks for completeness and compliance with payer requirements.
