

# Nymbbl and Medsender Integration

Your **seamless**,  
end-to-end solution.

AI-powered efax and document sorting

Referral management

HIPAA-compliant

Cloud-based

Nymbbl optimizes billing,  
claims, and revenue cycle  
management.

Medsender automates referral  
intake, chart creation, and  
scheduling with AI.

## Better Together

Eliminate administrative  
inefficiencies

Improve  
reimbursement speed

Ensure patients receive  
timely, coordinated care

Prosthetic & Orthotics  
Group reported saving  
at least thirty minutes  
of working time per  
person, per day  
across their offices  
after implementing  
Medsender.

With Medsender... I can show someone how  
to review and merge documents and delete  
unnecessary information or upload to Nymbbl in 10  
minutes and they are like,

**'Oh, this is easy, I get it.'**

**P&O Groups Operations Manager**  
Prosthetic & Orthotics Group

# A unified experience

## Key Benefits:

- 1. Automated Document Management**  
Simplify faxing, signing, and data entry to reduce administrative work. Quickly create patient charts, import key details, and schedule appointments—boosting booking volume by 15%.
- 2. Referral Management**  
Centralize referrals from email, fax, HIEs, and EHRs into one easy-to-manage dashboard. Quickly create patient charts, schedule appointments, and track referral status. Get real-time analytics on volume, sources, and time-to-care to improve efficiency and patient outcomes.
- 3. Enhanced Patient Care**  
By automating routine administrative tasks, DMEPOS professionals can spend more time with patients, improving interactions, clinical decision-making, and overall patient experience.
- 4. Improved Efficiency and Time Savings**  
Practice management system integration automates key tasks such as chart creation and document handling, reducing time spent on paperwork and allowing your team to focus more on patient care. With optimized workflows, practice staff can work faster and more efficiently.
- 5. Accurate and Real-Time Data**  
AI-driven data extraction ensures that documents are processed with high accuracy, eliminating human error and ensuring that patient charts are updated in real-time. This boosts the reliability and speed of information flow between staff and providers.

Ready for a seamless, automated, and secure communication system that integrates with existing EMRs and reduces manual workload?
