AI-Powered Notes

Spend more time with **patients**—not paperwork.

Automated transcription

Upload recordings from other devices

Review and refine before submitting

Structured for compliance

Nymbl's AI Notes feature uses advanced artificial intelligence to automatically transcribe and summarize clinical conversations, minimizing manual data entry and accelerating documentation.

Key Benefits:

1. **Save Time & Boost Productivity**
Clinicians can reclaim up to a full day per week by automating patient notes.

2. **Enhance Accuracy**
AI Notes generates transcripts and smart summaries from recorded interactions, making it easy to review and edit.

3. **Improve Patient Care**
With fewer distractions and faster documentation, clinicians can stay fully engaged with patients.

4. **Ensure Security & Compliance**
Role-based access and structured summaries support audit-ready documentation and integrate easily with standard templates.

The Nymbl Difference

Factors	With Nymbl AI-Powered Notes	Without Nymbl
Documentation Time	Up to 1 day/week saved	10-20 hours/week spent on manual notes
Note Accuracy	AI-structured summaries and manual review	Fully manual, more prone to errors
Workflow Integration	Seamless within Nymbl	Switching between tools, manual cut and paste
Security & Compliance	HIPAA-compliant, admin-managed access	Risk of PHI access and audit issues
Patient Focus	More attention during visits	Divided focus due to note-taking

"

Without a doubt, the single greatest benefit of Nymbl's AI Notes is the time it saves us. As a busy clinic, documenting patient interactions has always been a challenge—but now, it gets us 90% of the way there, and we just make a few quick edits. We're also capturing far more detail than when we relied on memory after the visit. Most importantly, AI Notes allows us to be fully present with our patients instead of focusing on typing or jotting down notes. We simply turn it on, and it does the rest."
